Data in Many Forms . . .

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered. Data are available on CD, diskette, computer print-out, microfiche and microfilm, and magnetic tape. Maps and other geographic reference materials are available for some types of data. Direct online access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable database and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Canadian Centre for Justice Statistics
Facsimile Number (1-613-951-6615)
Toll Free (1-800-387-2231)

Statistics Canada, Ottawa, Ontario, K1A 0T6 (Telephone: 1-613-951-9023) or to the Statistics Canada reference centre in:

Note of Appreciation

Canada owes the success of its statistical system to a long-standing cooperation involving Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

Symbols

The following standard symbols are used in Statistics Canada Publications:

- .. figures not available
- ... figures not appropriate or not applicable
- nil or zero
- amount too small to be expressed
- p preliminary figures
- r revised figures
- x confidential to meet secrecy requirements of the Statistics Act

This publication was prepared under the direction of:

- **Andy Kohut**, Executive Director, Canadian Centre for Justice Statistics
- **Paul McPhie**, Assistant Director
- **John Jackson**, Chief, Courts Program
- **Bob Kingsley**, Manager, Adult Criminal Court Survey
- **Brenda Bélanger**, Senior Analyst, Adult Criminal Court Survey
- **Diane Bowman**, Database Manager, Adult Criminal Court Survey
- **Alison Scott**, Technical Support Officer, Adult Criminal Court Survey

The paper used in this publication meets the minimum requirements of American National Standard for Information Sciences - Permanence of Paper for Printed Library Materials, ANSI Z39.48 - 1984.

1. Highlights

- There are eight jurisdictions included in the survey representing approximately 70 percent of the provincial/territorial adult criminal court caseload in Canada. This report contains provincial/territorial trend data for Prince Edward Island, Nova Scotia, Quebec, Ontario, Saskatchewan, and the Yukon. Newfoundland, and the Northwest Territories appear for the first time this year.
- The number of charges and cases initiated under federal statute offences showed no apparent pattern. They decreased in some jurisdictions while remaining stable in others.
- The number of federal statute charges and cases disposed of decreased in all but one jurisdiction.
- For Criminal Code offences, charges and cases disposed of declined across all jurisdictions.
- The number of Federal Statute case appearances increased in two, but decreased in three jurisdictions.
- Across participating jurisdictions, the proportion of charges disposed of by "guilty plea" for all offences ranged from 29% in the Yukon to 71% in Prince Edward Island.

2. Introduction

The Canadian Centre for Justice Statistics (CCJS) is the focal point of a federal-provincial/territorial initiative dedicated to the production of national statistics and information on the justice system in Canada. The Courts Program at CCJS collects and disseminates statistical information describing the operation of adult criminal courts and youth courts in Canada.

The report contains provincial and territorial criminal court data for eight jurisdictions: Newfoundland, Prince Edward Island, Nova Scotia, Quebec, Ontario, Saskatchewan, the Yukon, and the Northwest Territories. Data are available for Prince Edward Island, Nova Scotia, Quebec, and the Yukon for the entire period (fiscal year 1992-93 to 1994-95). The other provinces/territories have data available for part of the period. These eight jurisdictions represent approximately 70 percent of the provincial/territorial adult criminal court caseload in Canada.

This report is one in a series of annual data releases produced by the Courts Program. The report provides information on the changing nature of provincial/territorial court caseloads. The data presented include: the number of charges and cases initiated, by type of offence; the number of charges and cases disposed of, by type of disposition; and the number of trial and non-trial appearances, by fiscal quarter.

The data for the report come from the Adult Criminal Court Survey (ACCS). A second report containing data from the ACCS is the *Adult Criminal Court Statistics* report (Cat. No. 85-214). It provides detailed information on the characteristics of cases in provincial/territorial criminal courts by describing court processes, charge characteristics and outcomes, and basic characteristics of the accused. Data are reported for the same jurisdictions presented in the Caseload Trends report. Work is currently under way to develop interface software to generate ACCS data for British Columbia.

3. Adult Criminal Court Survey

3.1 Scope

The objective of the Adult Criminal Court Survey (ACCS) is to develop and maintain a national adult criminal court database of statistical information on appearances, charges, and cases. The survey is intended to be a census of federal and provincial/territorial statute charges and municipal by-law infractions heard in adult criminal courts in Canada. The ACCS has two components: Case Characteristics and Caseload. The Case Characteristics component collects detailed data on completed charges, appearances, and cases for federal statute offences. The Caseload component collects aggregate data on completed and pending charges, appearances and cases for federal and provincial statutes and municipal by-law offences.

3.2 Coverage

The ACCS currently collects Caseload data from provincial/territorial courts in eight jurisdictions. They are: Newfoundland (2 courts), Prince Edward Island (5 courts), Nova Scotia (38 courts), Quebec (54 courts), Ontario (92 courts), Saskatchewan (16 courts), the Yukon (18 courts) and the Northwest Territories (66 courts). As a result, the coverage of provincial and territorial adult criminal court caseload in Canada is approximately 70 percent for the Caseload component and 34% for the Case Characteristics component.

Not all provincial/territorial court locations in the participating jurisdictions currently report to the survey. Data for Newfoundland are reported for 2 court locations, St. John's and Clarenville, representing approximately 45% of federal statute charges heard in Newfoundland. Data for Halifax City Court, where approximately 15 percent of Nova Scotia's federal statute charges are heard, are not available. Quebec's 140 municipal courts do not report to the survey. Approximately 20 percent of federal statute charges in Quebec are heard in municipal courts.

On November 1, 1993, Quebec implemented a new system for capturing all provincial statute and municipal by-law offences. The ACCS is now able to capture data from this system with some residual data remaining during the transition from one system to another for provincial statute and municipal by-law offences. As a result, an unknown rate of over counting may have occurred for provincial and municipal offences since the third and fourth quarters of the fiscal year 1993-94, i.e. October 1993 - March 1994.

For the most part, the ACCS collects data related to adult criminal activities. However, information related to youths raised to adult court under the *Young Offenders Act* and the summary offence tickets (SOTS) issued to youths are also included in this report.

The absence of national coverage of provincial/territorial courts, and the unavailability of data from municipal, superior and appeal courts, represent limitations of the survey. Implementation of the ACCS at the provincial/territorial criminal court level is the current project priority due to the relatively large caseload at this court level and the extent of information system automation in provincial and territorial courts. Municipal, superior and appeal courts may be added to the survey as local operational systems become automated.

3.3 Methodological Overview

The Caseload component of the ACCS collects aggregate court data on volumes of charges, cases, and appearances from provincial and territorial management information systems, while the Case Characteristics component collects detailed appearance-level data. The data from both components are extracted using computer interface software and are submitted to the CCJS several times a year.

These data undergo assessment procedures in the provinces/territories and at CCJS. There is a CCJS edit system for the caseload data that identifies duplicate and missing data, and any logical inconsistencies in the relationships among data elements or between time periods. Similarly, case characteristics data are processed by an edit and imputation system which identifies and, where possible, corrects errors or logical inconsistencies within a field and/or inconsistencies in the relationships among data elements or records. The data from each component are then compared to other related data sources, such as the annual reports produced by the jurisdictions. Data from the two components of the survey (Caseload and Case Characteristics) are also examined for consistency. The results of this data assessment

process are used by both the ACCS and the provinces/territories to monitor data quality and to make modifications where data quality problems are identified.

For more detailed information on data quality issues, and the error detection and correction procedures employed in the ACCS, please refer to Appendix C: Methodological Notes.

3.4 Units of Count

The basic units of count derived by the Caseload component of the Adult Criminal Court Survey are: charges, summary offence tickets, cases, and case appearances. These are described below.

Charge:

For the caseload component of the ACCS, a charge is a formal accusation against an accused which results in at least one appearance in provincial/territorial court. Aggregate counts are collected by quarter under four categories: Pending at Start, Initiated, Disposed Of, and Pending at End. Charges are listed by statute type (federal statutes, provincial statutes, and municipal by-laws).

Summary Offence Tickets:

A summary offence ticket (SOT) is a formal accusation against an accused with a pre-set penalty, a fine, which may be paid before the initiation of court activity. A parking ticket is an example of a summary offence ticket - the fine can be paid and the charge disposed of without making any court appearances. Aggregate counts for SOTS are collected by quarter under four categories: Pending at Start, Initiated, Disposed Of, and Pending at End. SOTS are listed by statute type (federal statutes, provincial statutes, and municipal by-laws). Under current legislation, it is not possible to have SOTS for Criminal Code, Narcotic Control Act, or Food and Drugs Act offences.

Case:

A case is one or more charges or SOTS against the same person or corporation where the charges are first presented in the same court on the same date. SOTS which are disposed of by way of voluntary payment prior to any court appearance are not included in case counts. Aggregate counts for cases are collected by quarter under four categories: Pending at Start, Initiated, Disposed Of, and Pending at End. Cases are counted by statute type, but in order to do this, a Most Serious Statute (MSS) rule and a Most Serious Disposition (MSD) rule are used.

Case Appearance:

A case appearance is a court appearance by an accused for one or more related charges/SOTS where the charges are first presented in the same court on the same day. Each appearance during the reference period is counted. For example, an accused appearing in court on three different days during a quarter for the same case would equal three case appearances. Aggregate counts for case appearances are collected by quarter under two categories: Trial and Non-trial appearances. As with Case counts, a Most Serious Statute rule is required to produce case appearance tabulations.

See Appendix B for further details on ACCS definitions.

3.5 Data Limitations

ACCS data must be interpreted as **indicators** of caseload and case characteristics rather than precise measures for several reasons.

1. The extent of under-reporting - that is, the degree to which all appearances, charges and cases have been reported to the survey - is not known. Survey coverage and reporting are monitored and the provinces and territories inform CCJS of suspected reporting problems or anomalies wherever possible.
2. Case data presented in the tables are reported by Most Serious Statute. This type of data representation results in an under-counting of less serious cases.
3. The Caseload component of the ACCS counts a charge more than once under any of the following circumstances: a) if it is stayed and then restarted; b) if it is transferred from one court location to another; c) if it is committed for trial in Superior Court and then returns to Provincial Court; or d) if a bench warrant is issued and then the charge is restarted. Due to the aggregate nature of the Caseload counts, it is not possible to group these events into a single charge count.
4. Differences in sectoral policies, administration, definitions, and data collection methods may also result in differences in counts.
5. Data for Voluntary Payment Summary Offence Tickets (SOTS) in the Caseload component of the survey are not fully available, or for some jurisdictions they are not available according to survey specifications. Consequently, these data are not comprehensive, thus not comparable across jurisdictions.

The above-mentioned data limitations reduce the possibility of making accurate links with data from other sectors of the justice system, such as police and corrections. For these reasons, caution must be exercised when comparing ACCS data with data from other sectors of the criminal justice system.

The following notes and limitations are specific to the data reported for each participating jurisdiction. These notes should be considered when comparing data among jurisdictions.

Newfoundland:

1. Caseload data became partially available in the fiscal year 1994-95.
2. Data is only available for two court locations (St. John's and Clarenville) representing a jurisdictional coverage of 45 percent.
3. Summary offence ticket (SOT) data, which includes all Provincial Traffic data, are not available for 1994-95.

Prince Edward Island:

1. Prince Edward Island caseload data became available in the fiscal year 1992-93.

2. The summary offence ticket (SOT) disposition type "deemed guilty" is unavailable because Prince Edward Island legislation does not allow for *ex parte* findings of guilt.
3. Trial appearance counts are only available for federal offences. For provincial and municipal by-law offences, the distinction between trial and non-trial appearances is not available - all appearances are counted as non-trial appearances.
4. The three smallest court locations - Alberton, Georgetown and Souris - can only report the last appearance record for charges disposed of. As a result, they report only one (1) case appearance for each case, regardless of the actual number of appearances. Further, they are only able to report case appearances for provincial offences. Complete data will be available from these locations once they are automated. Together, these three locations process about 7 percent of charges initiated in Prince Edward Island.
5. The first court date is used as the initiation date for SOTS because the date of issue is currently unavailable. This results in under-reporting of pending counts.
6. The Caseload component of the ACCS considers a bench warrant to be a final disposition. Thus when a bench warrant is issued, a charge is counted as disposed and when the charge is restarted, it is counted as initiated. There are no pending counts associated with the issue of a bench warrant. In Prince Edward Island, however, the management information system is unable to determine when a charge disposed by bench warrant is reinitiated. To avoid losing these counts, bench warrants are included in the "disposed of" count and the "pending at start" count when they are issued. In essence, the "pending at start" count is used instead of the "initiated" count. The result is that for bench warrants in Prince Edward Island, the initiated counts are understated and the pending counts are overstated.

Nova Scotia:

1. Nova Scotia caseload data became available in the fiscal year 1990-91.
2. Data for the Halifax City Court are not currently available. This is a municipal court, administered by the City of Halifax, that has the same jurisdiction as a provincial criminal court. This court accounts for approximately 15 percent of Nova Scotia's caseload for federal statutes and 25 percent for provincial and municipal by-law offences.
3. On January 1, 1994, the Liverpool Provincial Court began reporting to the survey. Until that time no data were available. The volume of charges processed by this court is very small.

Quebec:

1. Quebec caseload data became available with the initial publication of ACCS data in the fiscal year 1990-91.
2. Information from the 140 municipal courts in Québec is currently unavailable. These courts hear approximately 20 percent of federal statute charges in Quebec, the majority of which are minor property offences. In addition, these courts hear the majority of provincial and municipal offences.

3. Data for summary offence tickets without court appearances are not available.
4. On November 1, 1993, Quebec implemented a new system for capturing all provincial statute and municipal by-law offences. The ACCS is now able to capture data from this system with some residual data remaining during the transition from one system to another system for provincial statute and municipal by-law offences. As a result, an unknown rate of over counting may have occurred for provincial and municipal offences since the third and fourth quarters of fiscal 1993-94, i.e. October 1993 - March 1995.
5. The ACCS does not receive further information on those charges for Quebec where a committal for trial to Superior Court is indicated on the last appearance. The majority of these charges will eventually return to provincial court for final disposition. This results in an under-reporting of counts for the remaining disposition types with approximately 10% of the Quebec total charge volume being affected.

Ontario:

1. Ontario caseload data became available in the fiscal year 1992-93.
2. Ontario data were not generated in the same manner as for the other jurisdictions. Micro data were obtained from the Integrated Court Offences Network (ICON) System at the Ministry of the Attorney General of Ontario and were processed by an interim program at CCJS to produce the data. The other jurisdictions have interface software which extracts the data from jurisdictional information systems.
3. For the interim caseload program, it is not possible to produce figures for cases and case appearances using the ACCS case definition (described in Section 3.4). As a result, these data have not been provided.
4. It is not possible with the interim caseload program to determine the number of SOTS disposed by voluntary payment. These counts are not included in the data.
5. Ontario shows a high volume of charges/cases withdrawn because once a charge is laid, a court appearance is necessary before it can be withdrawn.

Saskatchewan:

1. Saskatchewan caseload data became available in the fiscal year 1993-94.
2. The first court date is used as the initiation date for SOTS because the date of issue is unavailable. This results in under-reporting of pending counts.
3. SOT data are kept in a separate information system and are transferred on a regular basis to the main court system (Justice Automated Information Network - (JAIN)). The JAIN system is the source of all the caseload data. If a SOT is paid voluntarily prior to being transferred to the JAIN system, the information will be purged from the system and will never be transferred to JAIN. This results in an undercounting of SOTS disposed by voluntary payment.

Yukon:

1. Yukon caseload data became available in the fiscal year 1990-91.
2. A SOT disposed by voluntary payment is usually completed prior to a court appearance. As a result, there are no case or case appearance counts associated with SOTS disposed in this manner. In the Yukon, however, some voluntary payments of fines are made during a court appearance and, therefore, result in counts for cases and case appearances.

Northwest Territories:

1. Caseload data for the Northwest Territories became available in the fiscal year 1994-95.
2. Data for the Northwest Territories represents approximately 70% of territorial coverage for disposed of charges and cases. Transfers to other court locations have not been captured as final dispositions in this extract, which results in under counting of disposition type 'Other' (approximately 800 charges) in comparison to other jurisdictions. In addition, 10% of charges with a guilty disposition (approximately 200 charges or 5% of territorial coverage) are currently unavailable.

3.6 Comparability of ACCS Caseload and Case Characteristics Data

Counts for completed charges and cases contained in this report are not directly comparable to counts presented in the ACCS report from the Case Characteristics component. The following differences should be noted when examining counts from the two survey components:

1. The Caseload component considers a bench warrant to be a final disposition. Any subsequent appearances constitute the beginning of a new charge. This prevents pending at start counts from being inflated by inactive charges which are not being processed by the courts. The Case Characteristics component, however, considers any appearances subsequent to a bench warrant to be part of the same charge. This results in higher charge counts for Caseload than for Case Characteristics.
2. The Caseload component reports aggregate data that have been processed by provincial and territorial automated information systems. The Case Characteristics component collects microdata from the jurisdictions. It processes the data to eliminate uninterpretable or duplicate records, to correct errors, to impute missing data, and to derive the units of count. This difference in processing techniques may cause the Caseload counts to differ from the Case Characteristics counts.
3. The Case Characteristics component is offence based and the Caseload component is statute based. As a result, the two components employ different rules for counting cases having multiple charges. The Case Characteristics component employs a Most Serious Offence rule, while the Caseload component uses a Most Serious Statute rule. For example, the Case Characteristics component has a case with two charges - one under the Narcotic Control Act (trafficking) and one under the Criminal Code (joy riding). According to the Most Serious Offence rule, the case would be counted under the Narcotic Control Act offence because it is a more serious offence. The Caseload component, on the other hand, would view this case as having two offences - one

Criminal Code and one Narcotic Control Act. It would count the case under Criminal Code because, according to the Most Serious Statute rule, all Criminal Code offences are more serious than Narcotic Control Act offences.

4. The data for both survey components may be extracted at different times from the provincial/territorial operational systems. This may affect the comparability of the data for the two components due to updates made to the provincial/territorial databases.

3.7 Comparability of ACCS Data Across Provinces and Territories

Inter-provincial and territorial differences may be observed in the data included in this report. These differences may be the result of variation in court operations and recording procedures, the interpretation of statutes or legal concepts, sentencing practices and demographics. In addition, each province/territory has its own set of provincial statutes and municipal by-laws and, as described in Section 3.5 on Data Limitations, there can be differences between the survey definitions and what a province/territory is able to provide. For these reasons, caution should be exercised when comparing data for different provinces and territories.

3.8 Comparability of ACCS Data to Data from Other Sectors of the Justice System

Policing:

CCJS conducts the Uniform Crime Reporting Survey (UCR). This survey collects data on crimes reported to the police. Counts from the UCR for offences cleared by charge are not comparable to the ACCS figures for charges disposed of. There are many reasons for this. In part, it is the result of scoring rules used by the UCR Survey. The UCR counts violent offences in terms of the number of victims in the incident; non-violent offences are counted in terms of the number of separate incidents. Furthermore, the UCR figures include all offences involving youths, while the ACCS charge counts only include youth offences that have been transferred to adult court and the SOTS of youths.

Counts for adult accused reported by the UCR Survey differ from ACCS counts of cases disposed. Again, there are several reasons for the difference. ACCS counts for cases disposed include Criminal Code traffic offences while UCR counts do not. Charges laid by police may be screened out of the system before reaching court - charges can be withdrawn or alternative dispute resolution activities may be employed. Finally, time lags between the charging of an accused and the disposition of a case in court will result in differences in counts for the same reference period.

Corrections:

CCJS conducts an Adult Corrections Survey (ACS), which measures, among other things, the number of persons admitted to correctional facilities in Canada. ACCS counts for cases resulting in prison sentences will differ from corrections counts. The differences are attributable to a number of factors. Corrections admission counts include persons sentenced to prison in superior courts and fine default admissions, while the ACCS counts do not. Further, an accused may be sentenced to time served in remand custody prior to sentencing. This may result in the corrections data showing no sentenced admission to prison, while the ACCS data will indicate that a prison term was ordered. Finally, the case definition used by the ACCS may cause differences in the counts reported by the two surveys. For example, assume the ACCS data show two cases, both resulting in a prison sentence. It is possible with the ACCS definition of a case, that both cases are associated with the same accused. In this instance the ACCS would count two cases, whereas the ACS survey would count only one sentenced admission to prison.

5. Footnotes

Abbreviations:

CCC	Criminal Code of Canada
FDA	Food and Drugs Act
NCA	Narcotic Control Act
SOT(S)	Summary Offence Ticket(s)

General Notes:

1. Cases and Case Appearances are counted against the Most Serious Statute. See Appendix B for more details.
2. Prince Edward Island does not report any SOTS disposed by "deemed guilty" because the legislation does not allow for *ex parte* findings of guilt.
3. Prince Edward Island does not report Trial Hearings for Provincial Statute and Municipal By-law Offences - all appearances are counted as Non-trial Appearances.
4. Prince Edward Island does not report data for Municipal By-Law SOTS.
5. SOT counts for Prince Edward Island and Saskatchewan use the first court date rather than the date of issue for the date of initiation. This results in an under-reporting of pending counts.
6. The ACCS does not receive further information on those charges for Quebec where a committal for trial to Superior Court is indicated on the last appearance. The majority of these charges will eventually return to provincial court for final disposition. This results in an under-reporting of counts for the remaining disposition types with approximately 10% of the Quebec total charge volume being affected.
7. For Ontario, data for SOTS disposed by voluntary payment are not available.
8. An unknown rate of SOTS disposed by voluntary payment were undercounted for Saskatchewan.
9. Case and case appearance counts for the Yukon are overcounted at an unknown rate because they include some SOTS that have been disposed of by voluntary payment.
10. Data for the Northwest Territories represents approximately 70% of territorial coverage for disposed of charges and cases. Transfers to other court locations have not been captured as final dispositions in this extract, which results in under counting of disposition type 'Other' (approximately 800 charges) in comparison to other jurisdictions. In addition, 10% of charges with a guilty disposition (approximately 200 charges or 5% of territorial coverage) are currently unavailable.

Table 1

1. Pending at End = Pending at Start + Initiated - Disposed.

Table 2

1. Previous to 1994-95, Table 2 reported "All Offences" (Federal, Provincial and Municipal By-laws). For the current 1994-95 report, Table 2 includes Federal Statute Offences only.
2. Percentage change figures are calculated as follows:

$$\text{Percentage Change} = \frac{\text{Count (quarter 1, year 2)} - \text{Count (at quarter 1, year 1)}}{\text{Count (at quarter 1, year 1)}} \times 100\%$$

Table 3

1. With the introduction of a new penal code in Quebec, a second information system was built to capture provincial statute offences. The survey continues to extract federal statute offences from the original system, but now also extracts provincial statute data from a separate information system. Federal statutes are not affected by this transition however, provincial statute data from the second system are limited since they do not include pending counts. Neither do they include the residual provincial statute data from the original system. The residual provincial statute data is lost during the transition from one system to the two separate information systems.

Table 4

1. Previous to 1994-95, Table 2 reported "All Offences" (Federal, Provincial and Municipal By-laws). For the current 1994-95 report, Table 2 includes Federal Statute Offences only.
2. Percentage change figures are calculated as follows:

$$\text{Percentage Change} = \frac{\text{Count (quarter 1, year 2)} - \text{Count (at quarter 1, year 1)}}{\text{Count (at quarter 1, year 1)}} \times 100\%$$

Table 5

1. In Saskatchewan, the legislation regarding liquor offences has been revised into the Alcohol and Gaming Act. Offences under this new legislation are now included in the Provincial Statutes "Other" category. Fewer charges in Traffic and Liquor Provincial Statutes were laid during the reference period.
2. For Quebec, see footnote 1 for Table 3.

Table 6

1. The term "All Offences" refers to Federal, Provincial and Municipal By-law offences.

Table 8

1. The term "All Offences" refers to Federal, Provincial and Municipal By-law offences.
2. The Differential expressed as a number (#), is calculated as follows:

$$\text{Differential (quarter 1)} = \text{Initiated (quarter 1)} - \text{Disposed (quarter 1)}$$

3. The Differential expressed as a percent (%) is calculated as follows:

$$\text{Differential (quarter 1)} = \frac{\text{Initiated (quarter 1)} - \text{Disposed (quarter 1)}}{\text{Disposed (quarter 1)}} \times 100\%$$

Table 9

1. The Absolute Differential is calculated as follows:

$$\text{Differential (year 1)} = \text{Initiated (year 1)} - \text{Disposed (year 1)}$$

2. The Percentage Differential is calculated as follows:

$$\text{Differential (year 1)} = \frac{\text{Initiated (year 1)} - \text{Disposed (year 1)}}{\text{Disposed (year 1)}} \times 100\%$$

	1993	5,522,900		1993	39,800
	1994	5,575,700		1994	40,600
	1995	5,628,100		1995	41,400

Note:

- Population estimates released in October 1995, are for Adults aged 18 years and older. The figures for 1992 and 1993 are final postcensal estimates, the figures for 1994 are updated postcensal estimates and those for 1995 are preliminary postcensal estimates. (Statistics Canada, Demography Division, Population Estimates Section, Catalogue No. 91-002, Volume 9, No. 2).

APPENDIX B

ACCS - CASELOAD COMPONENT DEFINITIONS

B-1 ELEMENT DEFINITIONS

Federal Statutes: Acts and regulations, including the Criminal Code, enacted by Parliament and relating to matters within the authority of the federal government under the *Constitution Act*. Federal statutes are classified according to four headings: Criminal Code, Narcotic Control Act, Food and Drugs Act and Other Federal Statutes.

Provincial Statutes: Acts, ordinances and regulations enacted by a provincial or territorial legislature relating to matters within the authority of the provincial or territorial government, excluding Municipal By-laws. The tables show Traffic, Liquor, and Other Provincial Statutes. The content of these categories is different for each jurisdiction because each has its own set of acts, ordinances and regulations.

Municipal By-laws: Acts and regulations enacted by a municipal council relating to matters within the authority of the municipal government. The content of these categories is different for each jurisdiction.

Reference Periods - Quarters: The four quarters within a year with a span of three consecutive months. The four quarters commence with the months of January, April, July and October.

Court Level: Level of court at which hearings take place. The current focus is on provincial/territorial courts which hear criminal matters.

Court Location: Location of provincial/territorial court at which the appearance takes place, or in the case of summary offence tickets, the court location from which the summons is issued.

B-2 UNITS OF COUNT

The basic units of count derived by the Caseload component of the Adult Criminal Court Survey are: charges, summary offence tickets, cases, and case appearances. These are described below.

Charge:

A charge is a formal accusation against an accused which results in at least one appearance in provincial/territorial court. Aggregate counts are collected by quarter under four categories: Pending at Start, Initiated, Disposed Of, and Pending at End. Charges are listed by statute type (federal statutes, provincial statutes, and municipal by-laws). Charges not resulting in a court appearance are out of the scope of the survey.

Pending at Start: Charges pending at start had a court appearance in a previous reference period, but were not disposed by the beginning of the current reference period. Charges which were stayed or had a bench warrant issued in a previous reference period are not included in Pending at Start counts.

Initiated: Charges initiated have a first court appearance during the current reference period. Initiated includes first appearances for charges transferred from another court or court level

(i.e. superior court) within the province; charges transferred from outside the province/territory; and charges that are restarted after having been stayed or having a bench warrant issued.

Disposed Of : A charge is considered to be disposed if it has any one of the disposition types listed below within the reference period:

1. Stayed (includes adjourned sine die)
2. Withdrawn
3. Dismissed/Discharged at Preliminary Hearing (absolute or conditional discharges occurring after a finding of guilt would be counted under the "Found Guilty" category.)
4. Guilty Plea (accused pleads guilty and the plea is accepted)
5. Found Guilty (accused's guilt is based on the facts against them and not on the plea)
6. Found Not Guilty (acquitted of offence charged or acquitted on account of insanity)
7. Bench Warrant
8. Other (committed for trial in superior court, waived out of province, waived in province, quashed, nullity, unfit to stand trial, etc.)

Pending at End: Charges pending at end are those initiated in the current or any previous reference period, but not disposed by the end of the current reference period. Pending at End is derived by adding all charges Pending at Start plus Initiated charges, and subtracting all charges Disposed during the reference period. (i.e. Pending at End = Pending at Start + Initiated - Disposed of.)

Summary Offence Ticket:

A summary offence ticket (SOT) is a formal accusation against an accused with a pre-determined penalty, a fine, which may be paid before the initiation of court activity. A parking ticket is an example of a summary offence ticket - the fine can be paid and the charge disposed without making any court appearances. Aggregate counts for SOTS are collected by quarter under four categories: Pending at Start, Initiated, Disposed Of, and Pending at End. SOTS are listed by statute type (federal statutes, provincial statutes, and municipal by-laws). Under current legislation, it is not possible to have SOTS for Criminal Code, Narcotic Control Act, or Food and Drugs Act offences. In Quebec, a SOT is referred to as a notice of offence, and is used to initiate the charge process.

Pending at Start: SOTS pending at start were issued or had a court appearance in a previous reference period, but were not disposed by the beginning of the current reference period. SOTS which were stayed or had a bench warrant issued in a previous reference period are not included in Pending at Start counts.

Initiated: The date of issuance determines when a SOT is initiated. Thus, initiated SOTS are those that are issued during the current reference period. Initiated includes first appearances for SOTS that are restarted after having been stayed or having a bench warrant issued.

Disposed Of: A SOT is considered to be disposed if it has any one of the disposition types listed below within the reference period:

1. Voluntary Payment (voluntary payment, effort or agreement to pay prior to the appearance date)
2. Deemed Guilty (the accused or their representative fail to appear for a scheduled court appearance resulting in an automatic conviction)
3. Found Guilty (includes guilty plea)
4. Found Not Guilty (acquitted of offence charged)
5. Bench Warrant

6. Other (stayed, withdrawn, dismissed, discharged, waived out of province, waived in province, quashed, nullity, cancelled)

Pending at End: SOTS pending at end are those initiated in the current or any previous reference period, but not disposed of by the end of the current reference period. Pending at End is derived by adding all SOTS Pending at Start plus SOTS Initiated, and subtracting all SOTS Disposed of during the reference period. (i.e. Pending at End = Pending at Start + Initiated - Disposed of.)

Case:

A case is one or more charges or SOTS against the same person or corporation where the charges are first presented in the same court on the same date. SOTS which are disposed of by way of voluntary payment prior to any court appearance are not included in case counts. Aggregate counts for cases are collected by quarter under four categories: Pending at Start, Initiated, Disposed Of, and Pending at End. In order to properly tabulate cases, a Most Serious Statute rule and a Most Serious Disposition rule are used.

Most Serious Statute rule: The Most Serious Statute (MSS) rule applies when a case includes more than one charge or SOT. These cases are counted only once against the MSS. Further, the case will be counted only once during the reference period regardless of the number of court appearances. The statute hierarchy from most to least serious is as follows:

1. Criminal Code (CCC)
2. Narcotic Control Act (NCA)
3. Food and Drugs Act (FDA)
4. Other Federal Statutes
5. Provincial Traffic
6. Provincial Liquor
7. Other Provincial Statutes
8. Municipal By-laws

Most Serious Disposition rule: The Most Serious Disposition (MSD) rule applies when a case has more than one charge or SOT with the same Most Serious Statute. The case is counted once against the MSD. The disposition hierarchy from most to least serious is shown below. The disposition types are the same eight as those listed under the Charge unit of count.

1. Found Guilty (accused's guilt is based on the facts against them and not on the plea, includes Deemed Guilty)
2. Guilty Plea (accused pleads guilty and the plea is accepted)
3. Other (committed for trial in superior court, waived out of province, waived in province, quashed, nullity, unfit to stand trial, etc.)
4. Stayed (includes adjourned sine die)
5. Found Not Guilty (acquitted of offence charged or acquitted on account of insanity)
6. Dismissed/Discharged at Preliminary Hearing (absolute or conditional discharges occurring after a finding of guilt would be counted under the "Found guilty" category.)
7. Withdrawn
8. Bench Warrant

For example, a case involves three charges, a robbery (Criminal Code), an assault (Criminal Code), and a possession of drugs (Narcotic Control Act). There is a guilty disposition for the assault and possession charges and a found not guilty for the robbery charge. In applying the MSS rule, the case is counted under the Criminal Code statute. But, the MSD rule is needed because there are two Criminal Code offences with different dispositions (found guilty on the

assault charge and found not guilty on the robbery charge). Based on the MSD rule, the found guilty is a more serious disposition, therefore the case is counted under Criminal Code - Found Guilty.

Pending at Start: Cases pending at start had a court appearance in a previous reference period and not all related charges are disposed by the beginning of the current reference period.

Initiated: Cases initiated have a first court appearance during the current reference period. Initiated includes first appearances for charges transferred from another court or court level (i.e. superior court) and charges that are restarted after having been stayed or having a bench warrant issued. SOTS that have been disposed by way of voluntary payment prior to a court appearance are not included in the cases initiated count.

Disposed Of: A case is considered disposed if the last of the case's related charges has received a final disposition during the current reference period. Disposition types are the same as those listed under the Charge unit of count. SOTS disposed of by voluntary payment prior to the first appearance date, are not included in the cases disposed count.

Pending at End: Cases pending at end are those that are initiated in the current or any previous reference period, but all related charges have not been disposed of by the end of the current reference period. Pending at End is derived by adding all cases Pending at Start plus Initiated cases, and subtracting all cases Disposed Of during the reference period. (i.e. $\text{Pending at End} = \text{Pending at Start} + \text{Initiated} - \text{Disposed of.}$)

Case Appearance:

A case appearance is a court appearance by an accused for one or more related charges/SOTS, where the charges are first presented in the same court on the same date. Aggregate counts for case appearances are collected by quarter under two categories: non-trial and trial appearances. In order to properly tabulate case appearances, the Most Serious Statute rule is employed. (This is the same rule that is described for Case counts.)

For example, a case involves two charges, one a Criminal Code (CCC) and one a Narcotic Control Act (NCA) offence. During the quarter, the accused appears one day for both the CCC and NCA charges and on another day the accused appears for the NCA charge only. The count for case appearances during the quarter would be two and they would be counted under the Criminal Code because it is the Most Serious Statute.

Non-trial Appearances: Non-trial appearances include appearances for judicial interim release (bail) hearings, preliminary hearings, fitness hearings, first appearances, appearances for sentencing and any other appearances which are not trial appearances.

Trial Appearances: Trial appearances include all appearances for trial hearings.

APPENDIX C

METHODOLOGICAL NOTES

C-1 STAGES OF DATA FLOW AND POSSIBLE SOURCES OF ERROR

Administrative Survey data undergo numerous types of processing after the original collection of the data has taken place. Each process may introduce error, or a difference between the event and the final tabulation of the data. The following is a description of the four basic stages of data flow for the ACCS and possible types of errors that may occur.

Stage 1. Collection of the Original Data

The initial stage involves the recording of court proceedings in some form of docket. The types of errors which may be introduced include:

1. Response and Measurement Error: Provinces and territories and court locations within the same province or territory may differ in terms of court operations, recording procedures, and the interpretation of statutes or legal concepts.
2. Non-Response Error: Data pertaining to some variables may not be collected if not required for operational or administrative purposes.
3. Data Coding Errors: There may be clerical errors in the recording of court proceedings.

Stage 2. Provincial/Territorial Processing of the Original Data

Data from court dockets are loaded into the provincial and territorial automated operational systems. From there they are loaded into automated information system files within the jurisdiction. The types of errors which may be introduced at this stage include:

1. Coverage Error: Data for certain court locations may not be captured for inclusion in the automated files.
2. Non-Response Error: Data pertaining to some variables may not be captured for inclusion in the automated operational systems, though they exist in the court dockets.
3. Data Coding and Capture Errors: There may be clerical errors or delays in the coding of data on the docket or in the transformation of data from the docket into a machine-readable format.
4. Edit and Imputation Errors: The edit and imputation process used by the provincial/territorial systems may introduce errors.
5. System Errors: Processing of operational system files or management information system files may introduce some error.

Stage 3. Transcription of Information into Survey Format

Interface software selects the applicable records from automated court operational systems or management information systems in the provinces/territories. Records are then transcribed into the ACCS format and sent to the Canadian Centre for Justice Statistics (CCJS) for processing. The types of errors which may be introduced include:

1. System Errors: Interface software specifications may be incorrect or misinterpreted, or the interface software itself may contain errors.
2. Coverage Errors: The interface software may extract inappropriate records or miss records that should be included.

Stage 4. Processing of the Transcribed Data

Data received from the provinces and territories are edited and, if necessary, data from the Case Characteristics component are imputed before being added to the master files. Automated standard tables are produced from the contents of these files. The types of errors which may be introduced at this stage include:

1. System Errors: Processing specifications may be incorrect or misinterpreted. The processing programs themselves may also contain errors.
2. Edit and Imputation Errors: Although the Edit and Imputation systems are a tool for detecting and correcting errors, they may also be a source of error. The edit specifications may contain errors due to changes in court procedures or legislation. The edit and imputation rules may be misinterpreted or they may be too strict or too lax.

C-2 ACCS TOOLS FOR ASSURING DATA QUALITY

A number of tools have been developed for the ACCS to minimize or correct any possible errors identified above.

Interface Software Development Methodology

The ACCS minimizes system error, that may be introduced during the extraction and transcription of provincial or territorial data into ACCS format, by implementing a standard interface development methodology. This requires a complete testing of the software by both the ACCS and the province or territory prior to implementation. Interface development must proceed through the following stages:

1. The feasibility of developing interface software is investigated. A test environment is established in the automated operational or case management system of the province or territory to assist in the feasibility investigation and in the development of interface software.
2. Provincial or territorial data elements are mapped to the ACCS data requirements.
3. The interface software is run in a test environment using test data and the results are verified by both the ACCS and the province or territory. Differences between actual and expected results are identified and the required corrections are made.

4. The interface software is run in the production environment and the results are verified by both the province/territory and ACCS. Errors are identified and the required corrections are made.
5. An evaluation exercise is undertaken to assess the extent to which the data extracted by the interface match the data contained in the original provincial/territorial court files and automated operational or case management system files. The review facilitates the investigation of response errors or discrepancies between the published data and the original recording of the court event.

Testing of ACCS Data Processing Systems

To minimize the impact of system error and edit and imputation error, all systems developed at Statistics Canada, including the ACCS data processing system, are subject to logic testing by the developer, user acceptance testing performed by CCJS and/or the Methodology Division of Statistics Canada, and volume testing performed by the system developer. It should be noted, however, that these tests only approximate the infinite number of situations encountered in the real world. Periodic revision will also be required to reflect changes in court procedures and law. For these reasons, the ACCS data processing system undergoes continuous review and modification.

ACCS Edit and Imputation System

The main tool developed for the ACCS to identify and correct errors and to guide interface software development is an edit system for the Caseload component and an edit and imputation system for the Case Characteristics component. Erroneous data processed by the edit system may result in one of the following outcomes:

1. **Data are Rejected:** The types of errors that cause caseload data to be rejected include: missing or incorrect information in key fields (Province or Territory, Court Level, Court Identifier, Unit of Count, and Start or End Date) and duplicate records. There are three types of errors that cause case characteristics data to be rejected: missing or incorrect information in the key record identification fields (Province/Territory, Court Location, Information Number, Accused Identifier, Charge Sequence Number, and Court Appearance Date); charges not yet disposed; and duplicate appearance records. In most cases, records containing reject errors require respondent input to determine the appropriate action to be taken.
2. **Data are Corrected:** For the Case Characteristics component, a pre-determined correction is made based on the specific combination of data element values. This correction method applies when a value associated with a data element is incorrectly coded or a combination of data elements are logically inconsistent within an appearance record or charge.
3. **A Warning is Issued:** This occurs when there are inconsistencies in the combination of data elements or there is incorrect coding.

Data Assessment Procedures

Data assessment activities are undertaken by both the provinces/territories and the ACCS to monitor data quality and to provide direction for any modifications where data quality problems are identified. The data are subjected to year-to-year comparisons. ACCS Caseload data are compared to counts produced by the Case Characteristics component of the survey. Comparisons are made between the survey data and figures contained in the provincial/territorial reports of court operational or case management systems. The results of the data assessment process permit the identification of most types of errors occurring at all stages of data flow.
